

Bologna, April 17th 2009

To whom it may concern

This is to inform that the company Boldit has supplied us with resin floors for our headquarters in Bologna with very satisfying results. They have proven to be very well organized in the management of the work and flexible in handling the working hours – we needed to lay out the floor in the transit areas in evening hours and on week-ends and their personnel was very open to our requirements.

As far as the characteristics of the floor are concerned, it has proven to have a very good mechanical resistance and to be apt for industrial use. In the period of time we have been using it no malfunctions arose.

Also from an aesthetical point of view the floor has a very nice visual effect. All the delegations that come to visit us express their appreciation.

The floor we chose, which is of a light colour, created some difficulties in the cleaning operations at first. We then bought a specific cleaning machine and replaced the wheels with white ones, to avoid leaving tracks on the pavement.

To summarize, we have been satisfied with the work carried out by Boldit.

Kind regards

Mariella Criscuolo
